ABSTRACT

Áyurveda is an ancient system of life and also the oldest surviving medical system in the world. Among the standard references for Áyurveda medicine, Charakā, Sushrutā, Ashtanga Sangrahā / Ashtangā Hridayā Samhitā these trios are known as the Bruhattrayee and Madhava Nidana, Śārngdhara Samhitā and Bhavaprakasha these three trios are known as the Laghutrayee. Śārngdhara Samhitā which is a one among the Laghutrayee. The specialities of Śārngdhara Samhitā are as follow. He is explaining about classification of seasons according to constellations, detail examination of Nādi, definations of various terminologies, detail classification of the diseases, the method of Shodana and Marana, Panchakarama techniques and single herb formulations. Methods: A sincere study of classical text of Śārngdhara Samhitā and their available commentaries along with the websites and articles related to the anatomy. Results: It is the first Ayurvedic treatise to describe Nādi Parikshas a method of diagnosis of disease. He is also enumerated 78 diseases and their types, but never describes the Nidana aspects. In Śārngdhara Samhitā also explaining about the process of respiration. These show that the author is a very good poet with great imaginations. It is the first book describing the mechanism of respiration by making use of new terms like Ambarapiyush, Vishnupadamritha (both means Oxygen). Conclusion: In this article, an attempt has been made to discuss in detail about Acharya Śārngdhara and his work. The contribution of Acharya Śārngdhara in the field of Rachana Sharira is very important.

KEYWORDS: Rachana Sharira, Acharya Śārngdhara, Śārngdhara Samhitā, Laghutrayee.

INTRODUCTION

The human basics of Áyurveda are part of many Áyurvedic treaties that have been written, rewritten and revised over many centuries, including the description of diseases and treatment. The younger authors along the timeline made continuous increases to the older treaties. In order to give it fullness and completeness, new drugs, new disorders, new treatments and new formulations have been introduced to enrich this ancient medical science.

Acharya Śārngdhara. [1,2] has written a famous treatise on Áyurvedic medicine called Acharya Śārngdhara. It was classified as Laghutrayee or Áyurveda lower triad along with Madhava Nidana and Bhavaprakasha. He also wrote a treatise on Neeti Shastra, known as Śārngdhara Paddhati.

Family Background of Acharya Śārngdhara^[3]

In Śārngdhara Paddhati, Acharya Śārngdhara gave the details of his family and his family tree. According to this source, the family details of Śārngdhara are as show in below. Śārngdhara was the eldest son of Damodar and the grandson of Raghavadev.

In 13th Century, *Raghavadev* who was the grandfather of Śārngdhara, and also great poet in the court of King Hammir, *Raghavdev* ruled the land of *Shakambari*. Even today, *Shakambari* Devi Temple is seen to be located in Ambala Mandal, Haryana State, near *Kurukshetra*.

One of the products which emerged from the idea of simplification of the Áyurvedic treaties was Śārngdhara Samhitā. For the general practitioners of Áyurveda to read and learn, the Brihattrayi textbooks were very voluminous and challenging. As a result, the Áyurveda writers and scholars, who belonged to a later age, thought that these voluminous texts needed to extract and

ISO 9001:2015 Certified Journal

condense the important aspects and basics. They felt the need to write down the short treatises that could help Áyurvedic practise. Holding this in mind, most of the writers tried to compile short treatises from the 10th century onwards, thus giving rise to the *Laghutrayees*. Acharya Śārngdhara also followed the same theory and wrote his work on medicine, which later became famous as 'Śārngdhara Samhitā.'

Śārngdhara Samhitā^[4,5] is one of the best books on medicinal production in Áyurveda. The Samhitā is a part of Laghutrayee, written by Acharya Śārngdhara. The entire Samhitā comprised of three divisions, 32 chapters and 2,600 verses.

Prathama Khanda-It is the 1st division of the $S\bar{a}rngdhara\ Samhit\bar{a}$ and consists of seven chapters. It deals with the types of pharmaceutical formulations, pulse checking, food processing, disease numerology, scientific terminology, anatomy, physiology, etc.

Madhyama Khanda-It is the 2nd division of the Śārngdhara Samhitā and consists of the twelve chapters. It concerns Panchavidha Kashāya Kalpanā such as Swarasa, Kalka, Kōatha, Sheeta and Phānta. Preparations of different types of medicinal formulations such as Chūrna, Vatī, Lehyas, Tailas, Asava and Arishta, Rasa Aushadhas etc. Are described in this section.

Uttara Khanda-It is the 3rd division of the Śārngdhara Samhitā and there are thirteen chapter describe in this section. This section deals with details of Panchakarma i.e. Vamana, Virechana, Asthapana Vasti, Anuvasana Vasti and Nasya. In this khanda Acharya Śārngdhara also describe about the Swasthavritta, Lepadi Karmas, Anjanadi kriyas etc. are clarified.

MATERIALS AND METHODS

- 1. The Literary material related to the *Rachana Sharira* has been collected from text books of Śārngdhara Samhitā.
- 2. The Literary material related to the *Rachana Sharira* has been collected from commentaries of Śārngdhara Samhitā.

3. Articles and papers published in indexed journals related to Śārngdhara Samhitā which are relevant to the present study.

In Prathama Khanda of Śārngdhara Saṃhitā, 3rd Chapter Nādī Parikshādi Vidhi, Acharya Śārngdhara had describe about the examination of pulse. The presence of life signifies pulse at the wrist. In Adhamallas Dipika and Kasiramas Gudhartha Dipika, commentary of Śārngdhara Saṃhitā mentions about the examination of Nādī and also describe about the Samyak and Asamyak Nādī during different condition [6]. The physician should examine the health and disease of a person from Nādī Parikshādi. Acharya Śārngdhara also described different pathological condition of pulse in different situation.

Different Condition of Nādī and its Lakshan^[7]

The action of the pulse in Vāta Prakopa is similar to that of a leech or snake. The movement of the pulse in Pita Prakopa aggravation would be similar to that of a sparrow, crow, or frog. The movement of the pulse resembles that of a swan or pigeon when Kapha is aggravated. It will be similar to the movement of bustard quail, grey patridge, and button quail in the case of Sannipāta. It will be very slow and very fast in the Dvidosa kopa at times. Early death was declared by a pulse that had changed from its original position. Death is often indicated by a pulse that stops and starts intermittently. If fever is present, heart rate is quick and you feel wet. During Kāma and Krotha feelings, the pulse rate increases. Worry and anxiety trigger a decrease in pulse rate. Deficient digestive capacity and emaciation of body tissues can be seen in a very sluggish and weak pulse. In the case of $\bar{A}ma$, a warm pulse can be seen when the body is full of blood. It will be very heavy in the case of $\bar{A}ma$. When the digestive fire is involved, the pulse is light and fast. During hunger and after eating, the pulse movement is unsteady and slow, respectively. The pulse movement in healthy person is steady and strong.

In chapter $5^{th}Kal\bar{a}dik\bar{a}khy\bar{a}na$ Adhyaya, Acharya $\dot{S}\bar{a}r\underline{n}gdhara$ explained about the detail composition of the human body.

Table no.1: The composition of human body According to Acharya Śārngdhara. [8,9]

S.NO	COMPONENT OF THE HUMAN BODY	NUMBER
1	Kalās	7
2	Ásayās	7
3	Dhātūs	7
4	Dhātūs malās	7
5	Upadhātūs	7
6	Tvak	7
7	Dosās	3
8	Snāyūs	900
9	Sandhi	210
10	Asthi	300
11	Marmā	107
12	Sirās	700

13	Rasavāhinī dhamani	24
14	Māmsa pesīes in male	500
15	Māmsa pesīes in female	520
16	Kandarās	16
17	Dvārās in males	9
18	Dvārās in females	13

Table no.2: Twak-Praman according to Acharya Śārngdhara. [10,11]

S.NO	TVAK	ROGA ADHISTHANA	PRAMANA ^[12]
1	Avabhāsinī	Sidhma	1/18 th ofVrihi
2	Lohitā	Tilakalaka	1/16 th of Vrihi
3	Śveda	Carmadala	1/12 th of Vrihi
4	Tamra	Kilāsa and Śvirtra	1/8 th of Vrihi
5	Vedinī	All types of Kushta	1/5 th of Vrihi
6	Rohinī	Granthi,Ganda,Apachi	1 Vrihi
7	Sthula	Vidradhi	2 Vrihi

Acharya Śārngdhara has also description of *Tridosa*, its definition and types. *Dosās* are those which *Dusana* the body, *Dharana* the body are known as the *Dhātūs* and *Malānikaranada* the body are known as the *Māla*. [13] Along in these chapter, description of *Ojas* is also included.

Acharya Śārngdhara defines the form and position and role of the $V\bar{a}ta$. Acharya Śārngdhara also explains the three $Dos\bar{a}s$ and also describe Predominate of $V\bar{a}ta$ Dosa. Acharya Śārngdhara notes that Pita, Kapha, $Dhat\bar{u}s$ and $Mal\bar{a}s$ are unable to travel individually, and all of these are triggered by $V\bar{a}yu$ from place to place by wind activity, much like the clouds in the sky. Similarly, Acharya Śārngdhara also describe about the Pita and Kapha, its types and location, and function.

The structure which binds the *Māmsa*, *Asthi* and *Medas* is known as *Snāyu*. [16] *Prathana*, *Vrutha*, *Vrathula* and *Mahasnayu* are the types of *Snayu*. [17] The junctions of bones are known as *Sandhi*. There are two types of *Sandhi* these are *Chala* and *Achala*. [18] These are seat of *Kapha* and help the body parts together. *Asthi* are the supports of the body. The places where *Jeeva* reside are known as the *Marmās*. [19] The structure binds the parts together and transport the *Dosās* and *Dhatūs* is called as *Sirās*. There are two type of *Sira*, *Sthula* and *Sukhma*. The *Moola* of the *Siras* is *Nabhi*. Based on *Dosās*, the *Siras* are four type *Vatavaha*, *Pitavaha*, *Kaphavaha* and *Raktavaha Siras*. [20] *Dhamanī* carry *Rāsa* all over the body and fill it with air. *MāmsaPesi* confers body strength and tolerance. *Kandarās* are the *Mahasnayu* and its help in expansion and contraction of various body parts. [21]

Acharya Śārngdhara also explain about the orifice of the body. The total number of orifice is 10. These are as follow Nayana(2), Nāsa(2), Karna(2), Mehana(1), Apāna(1), Vaktra(1),Mastaka(1). He further explain about the Pratyanga of the body e.x. Phupphusa, Plīha, Yakrta, Tila, Vrikka, Vrisanas, Linga, Hridaya etc.

Phupphusa and Plīha is at left side and Yakrit at right side of heart which is situated in thorax region. Phupphusa is seat of Udana Vayu, Plīha is a source of RaktavahīSirās and Yakrit is a seat of Ranjaka Pita and also Raktasansraya. [24] The seat of the JalavāhīSirās is Tila. The nourishment of fat of the abdomen by the Vrikka. The source of Viryavahi Siras and Paurashvaha by the Vrisanas. [25] The Linga is the organ of reproduction and also passage for the Virya and Mutra. The Sthana of the Chetana and Ojas is Hridaya. Hridaya looks like a Kamalamukula which is located Adhomukha. [26] Sirās and Dhamani are arises from the Nābhi spread entire body and supplies constantly Vayu to all the Dhatus. [27] Acharya Śārngdhara also describe about the Prana Vāyu. The Prana Vāyu situated near the umbilicus moves upward to Hridaya and elimates through Kantha to consume Visnupadaamrutha and having part taken it moves quickly inside to enliven the entire body and stimulate the Jathāragni. [28] Acharya Śārngdhara also describe about the media for the attainment of Dhārma, Artha, Kāma and Moksha.[29] Acharya Śārngdhara also describe about the Sristi Utpatti Karma in chapter 5th of Pratham khanda. In which Acharya describe about the Mahat, Ahamkara, Panchatanamatra Bhuddhi, and Chatuvimshatapurusha.[31]

Acharya Śārngdhara also describe about the digestion and metabolism of the food in which he mention about the role of the *Pitadhara Kāla* in digestion. The essence i.e. nutrient portion of the food is known *Rasa* while its non nutrient part is known as *Kitta*. *Rasa* and other *Dhatūs* by the action of the *Pita* get transform into the *Sukra* and *Raja*. Rakta is formed from the *Rasa Dhatū*. The *Rakta* is located all over the body it the *Adhara* for the *Jeeva*. the quality of *Rakta* are as follow *Snighdha*, *Guru*, *Chala*, *Swadu*, *Vidhanga* etc. Acharya Śārngdhara also explained about the *Garbhasharira* in which *Garbha*, *Garbha Utpatti*, *Prakrutti*, dose of *Aushadha* month wise. Acharya Śārngdhara also describe about the *Nidra*, *Murcha*, *Tandra*, *Bhrama*, *Glani*, *Alasya*, *Jrumbha*, *Ksut*, *Udgara*

etc.^[36] *Nidra* is the effect of *Tamas and Kapha*. *Murcha* is due to *Pitta* and *Tamas*.^[37] *Bhrama* is due to *Raja*, *Pita* and *Vata*.^[38] *Tandra* is due to *Slesma*, *Tama* and *Anila*.^[39] *Glani* is due to *Ojaksaya*, *Dukha*, *Ajirna* and *Srama*.^[40] Lack of interest in work through capable of doing is known as *Alasya*.^[41] Expelling of air through the mouth widely opened due to weakness of tiredness of mind is known as *Jrimbha*.^[42] *Ksut* is a sound produced in the nose by the upward movement of *Prana Vata* and *Udana Vata* and *Tarpaka Kapha*.^[43] The movement of air upward from the stomach due to aggravation of *Udana* is called as *Udgara*.^[44]

In Madhyam Khanda, Acharya Śārngdhara has not been describe topic related to the Racāna Sharīra and Uttar Khanda, Virechan vidhinaam Adhyaya, Acharya Śārngdhara mention the word Indriyāni Balam, Bhudhi Prasāda, Vahni Dīpnam, Dhātu Sthairyam, Vaya Sthairyam are the effects of the Virechana therapy. [45] In Nasya Vidhi Adhyaya, he said that Lāghava Manash, Śudhi Srotasām, Vyādhi Sansksaya and Cittendriya Prasada are the Shudhī Lakshān of Nasya. [46] Similarly in Hina Shuddhi Acharya mention the word Kapha samsrava in Srotas and in Atiyoya Mastulanga and Indriya Vibharma mention. [47]

DISCUSSION

In Adhamallas Dipika and Kasiramas Gudhartha Dipika, commentary of Śārngdhara Samhitā briefly explained the different terminology as mention in table no. 1 and also describe types of individual terminology. He is also described about the Kalās, Ásayās, Dhātūs, Dhātūs malās, Upadhātūs and Tvak. All above different terminology are 7 in number. Table No. 2 shows that, total no. of Kalās, Ásayās, Dhātūs, Dhātūs malās, Upadhātūs and Tvak.

The first three Kalās present in Māmsa, Rakta and Medas; the fourth Kalās is present in Yakrit and Pliha; fifth Kalā is present in Antras; sixth Kalā is present in Agnidhara and seventh Kalā is known as Retodhara. These are the seven $Kal\bar{a}s$ of the body. There are seven Ásayās these are as follow Ślesmaśaya, Amāśaya, Agnyāśaya, Pavanaśaya, Malaśaya, Raktasaya. All these seven Ásayās present in both males and females. Acharya Śārngdhara also mentioned the three extra Asayā present in females these are Garbhasaya and two Stanyasyās. Rasa, Rakta, Māmsa, Medā, Asthi, Majjā, Śukra are the seven Dhatus. Kapha, Pita, Khamala, Sveda, Nakha and Roma, Netramala, Tvacha sneha are the Mālas of Dhatus. There are seven Upadhtus these are Stanya, Raja, Vasa, Sveda, Danta, Keśa and Ojas.

Acharya is also describing about the Tvak, its types and also different Roga which are seat in the different layer of the Tvak. Avabhasini, Lohita, Sveda, Tamra, Vedini, Rohini, Sthula these are seven type of Tvak. The total thickness of the seven layer of Tvak is two Vrihi.

RESULT AND CONCLUSION

Śārngdhara Samhitā is one of the most popular texts of Ayurveda in medieval period. It finds the place in Laghu Trayee along with Madhava Nidana and Bhava Prakasa. Śārngdhara Samhitā is an important reference text for Racāna Sharīra. Its uniqueness in explaining and presenting certain topics like Nādi Pariksha, measurements, Svashsan Kriya, Kāla Sharīra, Agni, Dosa, Dhatu, Mala, Tvacha Sharīra, and no. of the body parts etc. makes it an important treatise.

It is the first Ayurvedic treatise to describe Nādi Parikshas a method of diagnosis of disease. He is also enumerated 78 diseases and their types, but never describes the Nidana aspects. In Śārngdhara Samhitā also explaining about the process of respiration. This shows that the author is a very good poet with great imaginations. It is the first book describing the mechanism of respiration by making use of new terms like Ambarapiyush, Vishnupadamritha (both means Oxygen).
